What if daylight saving happened gradually?

The left clock jumps an hour twice a year, like yours does now. The right clock spreads that hour over months — a few seconds per day. Click the stops to see how they diverge and converge through the year.

▶ How this app started

If there were a single source of truth for time, we could rig it to give the benefits of daylight saving without the abrupt shifts, and the world would automatically adapt. There isn't. The next best thing is to tweak your own daily routine.

Try Smooth Time

A bedside alarm clock that shifts your wake-up time by seconds per day — so you adapt to daylight saving gradually, without ever losing an hour of sleep.
